

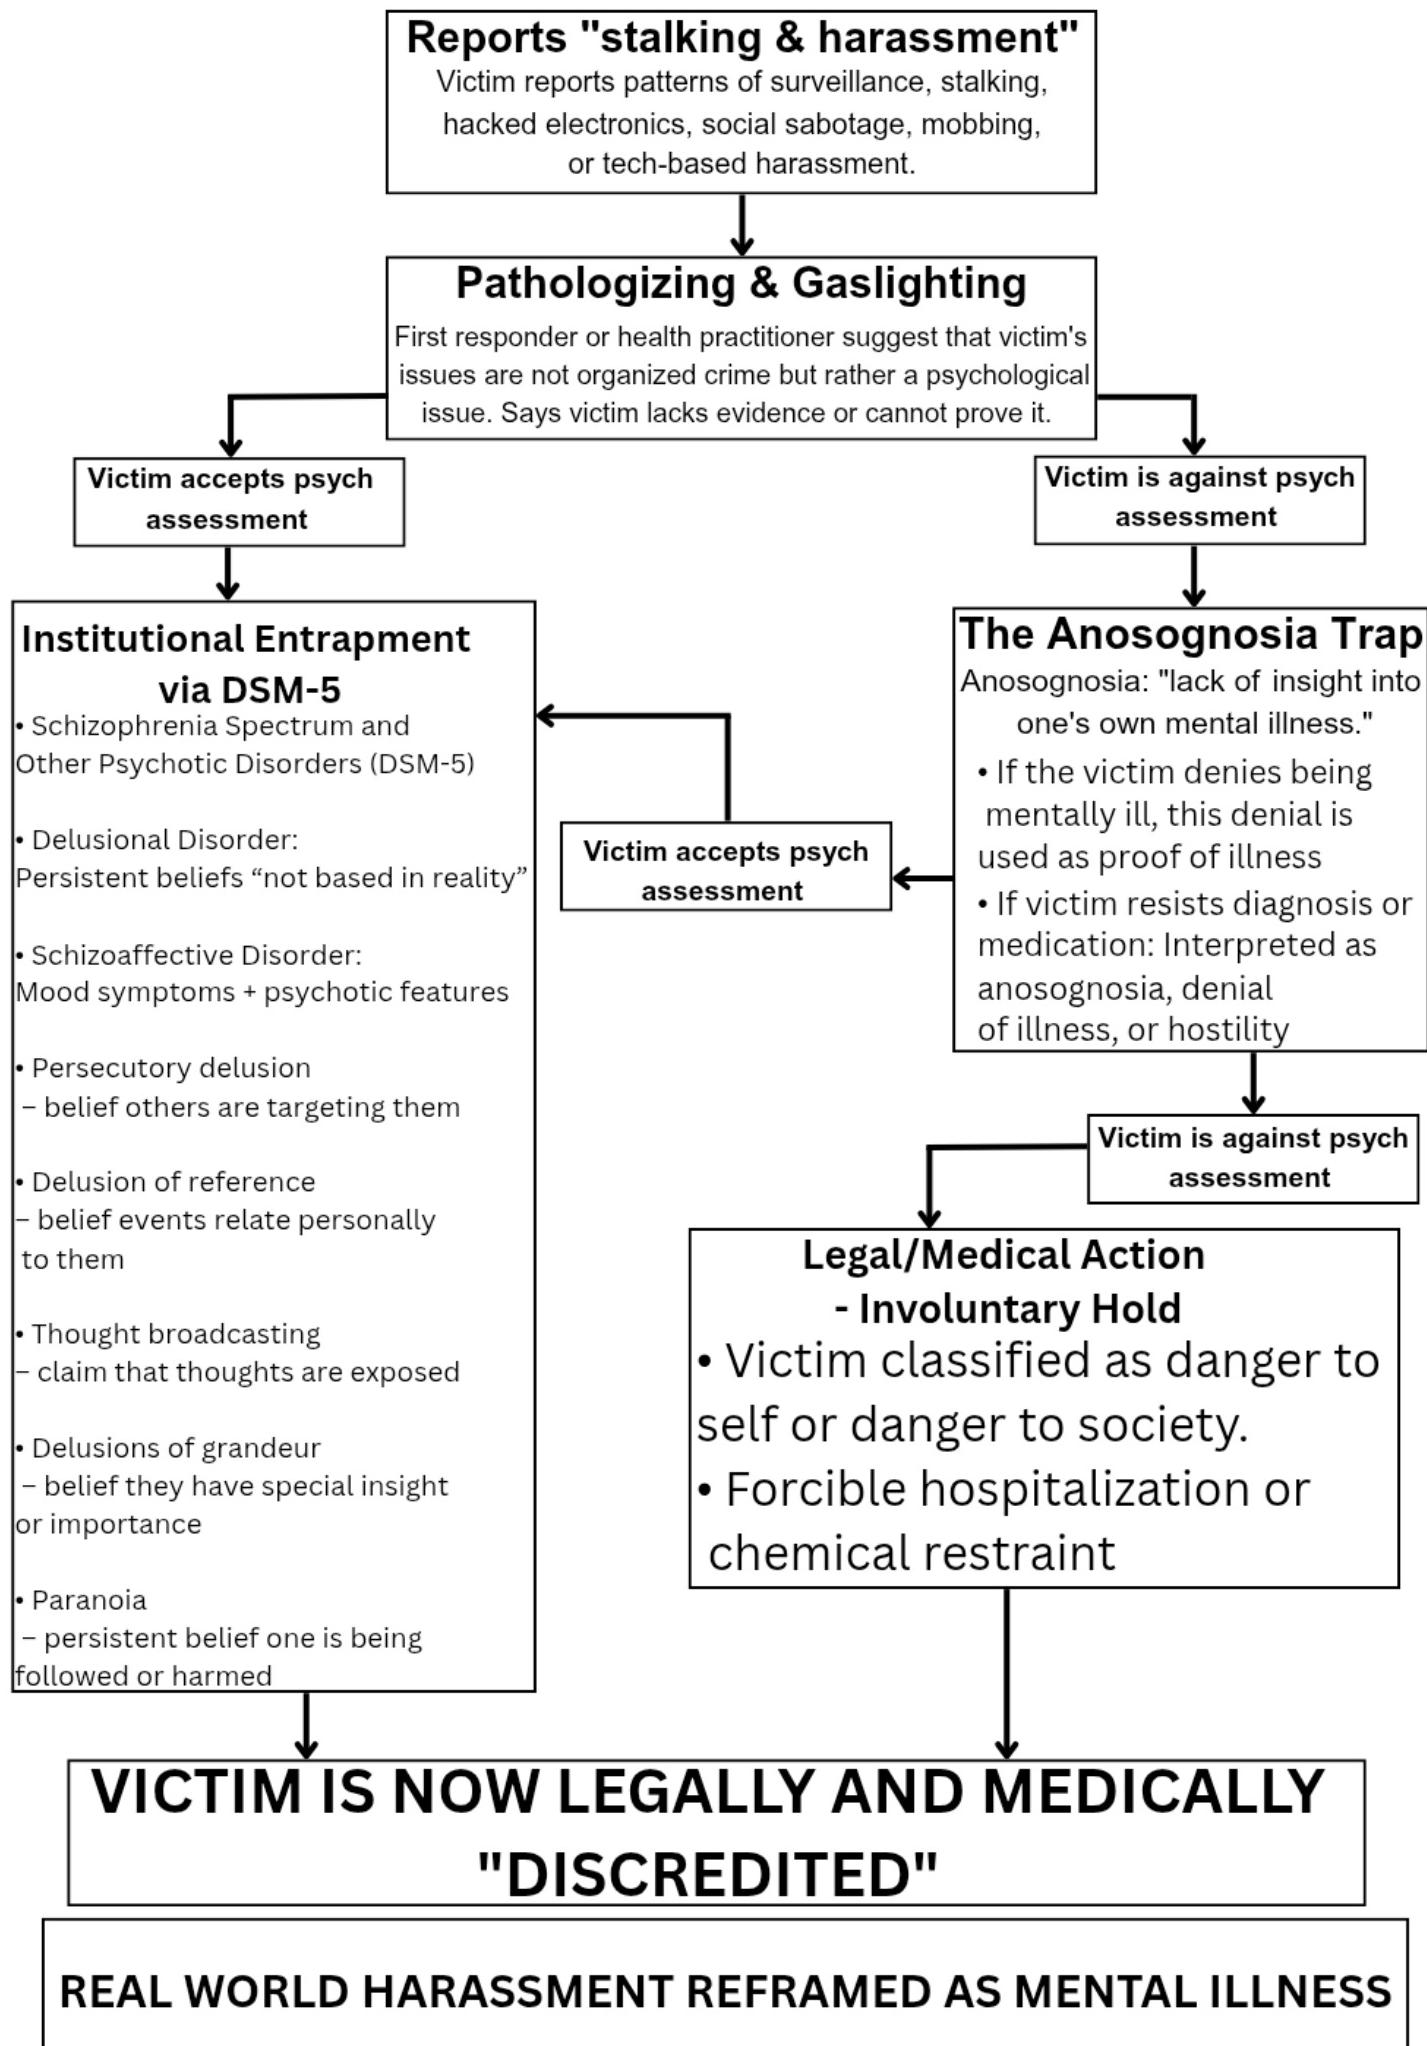

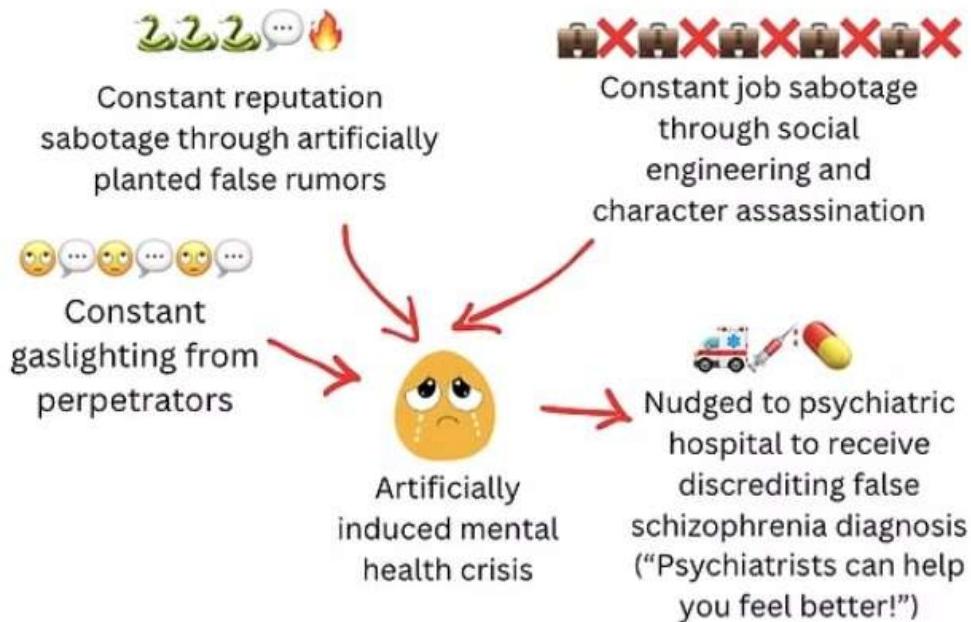

Figure 1. Weaponized Psychiatry Against Victims of Covert Harassment (Targeted Individuals & Gangstalking)

How Victims Are Pushed Toward Psychiatric Traps in Gang Stalking

It is unethical and psychopathic!

How Schizophrenia Is Abused As A Cover Story

THE COVERT GANGSTALKING TORTURE & SOCIAL ENGINEERING ON THE HOMELESS AND ADDICTS

① TARGET ACQUIRED

Homeless individual purchases drugs.

② COUNTERINTELLIGENCE BEGINS

Corrupt intelligence network with private companies begins phone tap/hack invasion of privacy

③ ON DRUGS

Stalking, harassment, directed energy attacks & mind control

④ SOBER

Harassment pulls back.

⑤ HARASSMENT DISMISSED

The harassment is dismissed by first responders as drug-induced psychosis or persecutory delusion.

Weaponized Psychiatry Against Victims of Covert Harassment

"From Targeted Truth-Teller to 'Dangerously Delusional'"

PHASE 1: The Trigger – Speaking Out

➤ Step 1: Report of Harassment or Surveillance

Victim reports credible patterns of:

- Surveillance, gangstalking, strange electronic interference
- Social sabotage, workplace mobbing, or tech-based harassment
- (TI complaints often include these patterns)

➤ Step 2: Dismissal as "Paranoia" or "Conspiracy Thinking"

- Claims dismissed outright by authorities, doctors, media, family

• Labeled as:

"Paranoid personality"

"Conspiratorial ideation"

"Schizoaffective signs"

- Any reference to systemic abuse framed as delusion

PHASE 2: Pathologizing Perception

➤ Step 3: Psychiatric Framing of Reality

Victim's beliefs recast using DSM-5 terminology:

- Persecutory delusion – belief others are targeting them
- Delusion of reference – belief events relate personally to them
- Thought broadcasting – claim that thoughts are exposed
- Delusions of grandeur – belief they have special insight or importance
- Paranoia – persistent belief one is being followed or harmed

DSM-5 Quote:

"Delusions are fixed beliefs that are not amenable to change in light of conflicting evidence." (DSM-5-TR, Schizophrenia Spectrum)

PHASE 3: Denial Becomes a Symptom – The Anosognosia Trap

➤ Step 4: Introduction of Anosognosia

- If the victim denies being mentally ill, this denial is used as proof of illness

Anosognosia: "A brain-based lack of insight into one's own mental illness."

If victim resists diagnosis or medication:

Interpreted as anosognosia, denial of illness, or hostility

If victim complies and still reports harassment: Labeled “textbook case” – medication isn’t “working,” proving chronic illness

PHASE 4: Institutional Entrapment via DSM-5

- Step 5: Application of DSM-5 Criteria
 - Clinicians cherry-pick behavior to meet:
 - Schizophrenia Spectrum and Other Psychotic Disorders (DSM-5)
 - Delusional Disorder: Persistent beliefs “not based in reality”
 - Schizoaffective Disorder: Mood symptoms + psychotic features

DSM-5 Reference:

“To meet criteria for delusional disorder, the presence of one or more delusions with a duration of 1 month or longer is required.”

PHASE 5: Escalating the Threat Narrative

- Step 6: Framing the Victim as “Dangerous”
 - Irritability → “Hostility”
 - Obsession with documentation → “Fixation”
 - Refusal of meds → “Uncooperative” or “a danger to self or others”

If victim is calm: “Flat affect”

If victim is emotional: “Emotional lability”

Manual tactic: "Psychiatric doublespeak" ensures patients are misled to corner themselves into a diagnosis.

PHASE 6: Incarceration via Medicine

- Step 7: Diagnosis Cemented
 - Diagnostic label formalized
 - Used to nullify all future testimony
- “They say they’re being stalked? Classic persecutory delusion.”

- Step 8: Legal/Medical Action Initiated
 - Civil commitment:
 - 5150 hold (California), Baker Act (Florida), Sectioning (UK), or similar
 - Forceable hospitalization or chemical restraint
 - Loss of autonomy, potentially indefinite surveillance

Final Outcome:

Victim is now legally and medically “discredited.”

- Family/friends dismiss further complaints
- Online support groups may label them unstable
- Law enforcement unlikely to take any claim seriously
- All future behavior filtered through psychiatric lens

If-Then Feedback Loops

IF Victim...

THEN System Responds...

IF Victim → Denies illness

THEN System Responds → "Has no insight" → Anosognosia

IF Victim → Accepts treatment but still reports targeting

THEN System Responds → "Classic delusion" → Chronic schizophrenia

IF Victim → Acts confused, depressed, or traumatized

THEN System Responds → "Disorganized thinking"

IF Victim → Documents abuse obsessively

THEN System Responds → "Fixated" → Obsessive paranoia

IF Victim → Tries to legally fight back

THEN System Responds → "Grandiose delusion"

Historical & Modern Examples:

- Soviet Psychiatry (USSR):

Dissidents were often diagnosed with "sluggish schizophrenia" for opposing state ideology.

- Zersetzung (German Stasi)

a psychological warfare technique, designed to damage mental health of a person it was applied to by subtly undermining all aspects of one's life, using variety of methods of sabotage.

- Project MKULTRA (USA):

Real victims of government experiments were labeled paranoid when they spoke out.

- Contemporary Targeted Individuals (TIs):

Thousands globally report identical patterns of covert harassment. Most are labeled psychotic despite consistency across testimonies.

Real experiences reframed as madness.

A diagnostic system that absorbs dissent becomes an instrument of control.

From Lily Yang, author of Operation Architect:

What if I told you that something deeply troubling was happening even in so-called free countries, and that elites had a covert system to destroy people's lives and push them to negative life outcomes such as suicide while superficially making it look like help for the mentally ill?

What if I told you I have experienced such a system myself, but no one believes me because I have been discredited with a schizophrenia diagnosis?

What if schizophrenia was being artificially mimicked and weaponized to erase people from society as a covert program sponsored by global elites?

Then, imagine losing everything: your career, your reputation, and your freedom. The person behind it? Your sister. A psychological thriller based on a true story.
